## Key Benefits:

- SOAR
- Certificate Monitoring
- Geographic Risk Management
- Rogue IT Detection
- OS Vulnerability Detection
- Communications Policy Monitoring
- NetFlow Security Monitoring
- Dictionary Attack Detection
- DNS Record Monitoring
- New Device Discovery
- Exposure Reporting
- Rapid Quarantine
- Security Footprint Search
- Suspicious Communications
- Nightly Security Report
- IoT Security
- Network Asset Management

Business Benefits

Having a security platform fully integrated into the core NMS reduces configuration effort and ensures that Total Security Visibility™ is achieved. This full integration also aids in collaboration between the NetOps and SecOps teams, ensuring that both teams have complete understanding of the network environment.

Technical Benefits

TotalVIew's SecOps module benefits from the large data repository created by the core TotalView product to add SOAR (Security Orchestration, Automation, and Response), ASM (Attack Surface Management, and NDR (Network Detection and Response) capabilities.
